

Display SC-LCD

Display SC-LCD

Display SC-LCD for gas sensors

Can be connected to DKD systems and others by means of current, voltage, frequency signal or by means of Modbus protocol on RS485-IS.

Advantages:

- ✓ Automatic device
- ✓ Adjustable analog and digital output
- ✓ ATEX certification
- ✓ Display large text and numbers

The SC-LCD display is intended for displaying the volume concentration of combustible gases from the connected sensor. The SC-LCD display is used in operation when the sensor is functional in an inaccessible place out of reach of the operator. The non-explosive design allows use even in areas with a dangerous explosion in coal mines, or in zones 0, 1, 2, 20, 21 and 22 on the surface.

The sensor with display can be connected to DKD, PNS and other systems via current, voltage, frequency signal or via MODBUS ASCII or RTU protocol.

Important Note: The technical parameters of the SC-LCD product can be adjusted. Contact us for further technical advice and tailor-made solutions.
